

throw keyword rules

- 1) throw keyword must be placed only inside a method/constructor
- 2) throw keyword can not be placed at CL, inside SB and IIB
- 3) throw keyword can not be placed inside method declaration means in prototype
- 4) after throw keyword only Throwable type objects are allowed
- 5) after throw keyword only one Throwable object is allowed
- 6) after throw statement we can not place any statement directly
if we need to place some statements after throw statement we must place this throw statement inside if(-) condition
- 7) If we need to throw multiple exceptions, we must use throw keyword multiple times one time per for each exception.
But we must place each throw statement in one if(-) condition
