

try, catch, finally rules

- 1) we can not place only try, with out catch or finally
- 2) we can not place only catch, without try
- 3) we can not place only finally, without try or try,catch
- 4) we can not palce try,catch,finally at class level
we can place try,catch, finally only inside SB/NSB/Cons/Met
- 5) we can not place all types of classes as paramter to catch
we can use only Throwable type class as catch parameter
- 6) we can place multiple catch blocks for one single try
but we can not duplicate them and we can not place
super class exception catch block before sub class exception
catch block
- 7) we can not place multiple finally blocks for one try
we can place only one finally for one try
- 8) between try, catch, finally blocks we can not place
any statement, we will get CEs to try,catch, finally.
- 9) we must place try, then catch, and then finally
we can not place catch after finally, it leads CE
